

## **TauRIS Clubsoftware Additional information CW1.44-US**

Some enhancements are brought into the new TauRIS Clubsoftware CW 1.44-US.  
The software now handles up to 15 COM-ports. If you start the software for the first time you are commanded to select a COM-port. Click on OK and select a COM-Port and type in the appropriate information.

Also, if you are using a USB to serial converter and plug in the converter into different USB ports, the ComPort number may change.

The TauRIS Clubsoftware CW 1.44-US will notice this and gives you a warning.

Automatically the highest ComPort number is suggested to confirm.
